

High-Tech

Seakeeper is a computer controlled gyroscope that eliminates most boat roll, including the fatigue, anxiety, and seasickness that go with it.

LightWeight

Typically, the Seakeeper weighs between 2% - 4% of boat weight, half or less the power of air conditioning, and fits in available space in the back half of the boat.

Flexible

Our models can accommodate boats over 30'. They can be installed virtually anywhere on board. This flexibility means that approximately 25% of the units we ship are installed aftermarket.

We Aim to Eliminate up to 95% of Boat Roll on Every Installation

Making sure you have the highest level of stabilization while out on the water is important to us. That's why we look at every Seakeeper installation individually. We customize our product recommendation based on the parameters and use of your specific boat. To ensure our high standards have been met, we developed the Seakeeper Mobile App to record sea trials on our installations which has allowed us to create a database displaying the real-life results of hundreds of installations.

SEAKEEPER

STABILIZATION

This hereby certifies that

NEWPORT HARBOR SHIPYARD

Has successfully met the requirements set forth by Seakeeper, Inc. for the distinction of
